

**ABSTRACT OF THE DISCLOSURE**

5 A skateboard has a platform supported on a tubular frame. The frame is engaged with a pair  
of wheel trucks, one with a at least one wheel, the other with a pair of wheels. An electrical  
motor, and a power source are mounted below the platform to the frame. The at least one  
wheel is positioned proximate a forward end of the platform, and the pair of wheels are  
positioned proximate a rearward end of the platform. The motor engages the at least one  
10 wheel and is able to be tuned on and off by a remote switch accessible to a hand or foot of  
the rider. A front and rear receivers enable attachment of a wide range of accessories  
including a seat, handle bar and lights.
